EXPERIENCE

Dycom Industries / Lead UX Designer

Mar 2014 - Present, West Palm Beach

I am currently the lead designer on a team of designers, researchers and communication professionals. The team is responsible for identifying areas in need of enhancement in an internally developed product suite.

On a day to day basis I am creating prototypes in design tools or code for solutions, and validating ideas with users before presenting to stakeholders. I also mentor other members of the team in developing their skills and growing into new roles. I collaborate closely with product owners, researchers, and developers, and strategize with leadership to ensure that design is always included in product development.

I also own the company design system, and oversee the enhancement of components as business needs change as well as the effort to get all product teams using the system.

TEM Inc. / Web Designer & Developer

Jan 2019 - Feb 2021, Remote

I collaborated with the business owner to maintain an existing website that he came into ownership of when he took over the business. The website was outdated but required updates, so a plan was developed to maintain the existing site while designing and developing a more modern alternative.

I created media assets for the website and developed and deployed the final solution.

Freelance Web Design & Development

Feb 2007 - Mar 2014, Various locations

I worked with various local businesses to provide them with an online presence to market their goods and services. This allowed me to practice my design and development skills, while also learning how to close projects out and deliver to stakeholders.

SKILLS

Design:

Wireframe & mockups in tools like Figma

Motion design in After Effects

Illustrations in Illustrator

3D modelling and animation

Data visualization

Prototyping:

Interactive prototypes in tools like Figma

Interactive flows in HTML/CSS/JS

Frameworks for POC (Angular, React, Vue)

3D modelling and animation

Research:

Stakeholder analysis

User interviews & observation

Usability studies in tools such as Morae

A/B testing

Google Analytics & Tag Manager

Collaboration:

Hosting workshop sessions

 DesignOps strategy

Conducting peer review sessions

Encouraging growth
